TEAM EsTEAM. Keeping you informed on the latest and greatest with TEAM Santa Rosa.

Please reply to this email if you wish to be removed from the EsTEAM distribution list.

TEAM is working with the City of Gulf Breeze and City of Milton to create marketing plans to bring industry to their specific communities. This is the first couple of several marketing concepts of this nature that TEAM is working on for the County.

TEAM is continuing with Phase II of the Gulf Coast Aerospace and Defense Coalition. As a region, we are reviewing industry research with our existing aerospace and defense industries that will guide our recruitment efforts-- specifically, companies that can offer good sustainable jobs in the Aerospace and Defense industry. What better way to develop a list of target companies than to ask our existing companies who they suggest? Phase I was spent creating a dossier on these companies. Now that we have the information we need, we can move forward with our recruitment efforts, particularly since we are ready to recruit to Whiting Aviation Park. Over the next few months, we will be meeting with these companies.

The Santa Rosa County Commission next week will receive an incentive plan from TEAM that is a result of input from the commission during an economic development workshop held last year, and through our research of the incentive plans of other communities. This plan will allow the County to provide local incentives to specific qualified industries no matter where they choose to locate in the County. There are already incentives in place for companies that locate to a county-owned industrial property. Nothing, however, is yet in place for privately owned green space or existing buildings. We want to be able to offer local incentives to all targeted industries wishing to locate here.
