EsTEAM

TEAM is assisting the Small Business Development Center with the State of Florida's "bridge loan" program. The program utilizes public funds to provide small businesses in Florida with a no-interest infusion of cash to bridge the gap between economic injury from the oil spill and future financial recovery programs that are anticipated from BP and the federal government.

We've begun the master planning of the Whiting Aviation Park and the entrance is currently under construction. Monument signage for the entrance is being designed now and should be in place later this summer.

The governor has signed off on Project Snake Eyes. We are now finalizing the language in the contract and anticipate an announcement in early July.

The latest round of defense grants is being released from the State of Florida. TEAM will be submitting applications for these grants to cover additional costs of land acquisition around NASWF, funding for TEAM's military consultant, initiation of the taxiway associated with the new Whiting Aviation Park and other infrastructure associated with Whiting Aviation Park. The grants will also enable us to further protect and enhance our military missions. Past uses of this funding have included the purchase of land and conducting of research.
